Debrief

Run by

Stage 13 dry run (rehearsal, chromium)

Scenario	Stab wound: tamponade, PEA and pericardiocentesis
Patient	M 30 y 80 kg
Started	10/11/2026, 5:24:00 PM
Duration	15:04 simulated · 3 min 47 s on the clock

Objectives

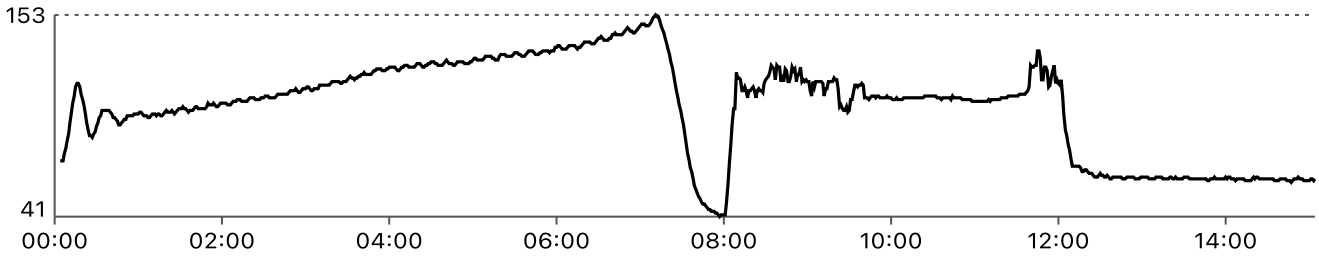

1. **– Not assessable** Name the tamponade within 180 s of arrival from the monitor: tachycardia, narrow pulse pressure, CVP above 15 mmHg (instructor-assessed)
   This objective has no rule: the instructor judges it.
2. **✕ Not met** Start CPR within 10 s of the pulse loss
   CPR 12 s after the pulse loss (07:48 → 08:00; within 10 s asked).
3. **✕ Not met** Pericardiocentesis within 120 s of starting CPR
   The state "CPR: pericardium drained, catheter left in" 2 min 00 s after CPR (08:00 → 10:00; within 2 min 00 s asked).
4. **✓ Met** Stop CPR (“Pulse back”) within 30 s of the pulse returning on the arterial line and the capnogram
   The state "Return of circulation: ventilated, catheter in the pericardium" 24 s after the return of circulation (11:37 → 12:01; within 30 s asked).
5. **✕ Not met** Better: pericardiocentesis before the pulse loss, while the systolic pressure is above 60 mmHg — then no PEA follows
   The pulse loss at 07:48

Measured facts

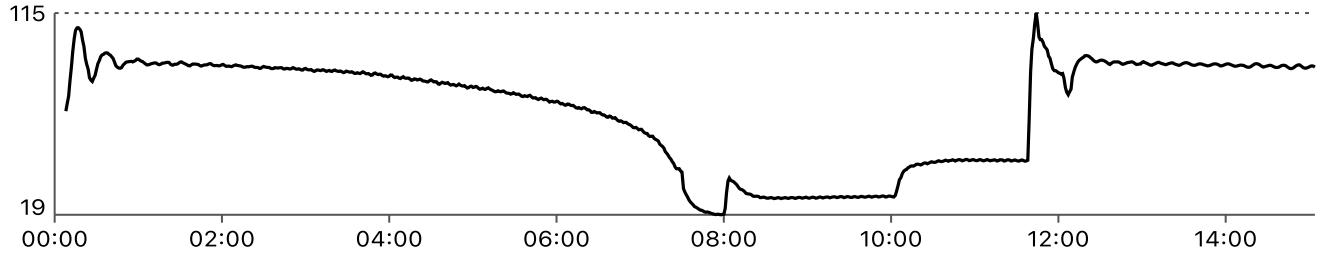

Lowest SpO_2	95 % at 00:28
Lowest ART M / NIBP M	19 mmHg at 07:58
Highest $EtCO_2$	39 mmHg at 13:04
Highest T1 / T2	36.8 °C at 00:01
Pulseless	3 min 49 s in all; first lost at 07:48
Return of circulation	3 min 49 s after the pulse loss (11:37)
Labs (the model): last (lowest–highest)	K^+ 4.3 mmol/L (4.2–4.3) · Lactate 2.2 mmol/L (1.0–2.4) · pH 7.34 (7.26–7.41) · Glucose 6.0 mmol/L (5.6–6.0) · Tcore 36.7 °C (36.7–36.8)

Drugs and fluids

Time	Given
12:33	Crystalloid 500 mL over 5 min

Timeline

Time	Kind	Event
00:00	Scenario	Scenario loaded: Stab wound: tamponade, PEA and pericardiocentesis
00:00	Scenario	Scenario state: Arrival: tachycardic, narrow pulse pressure, raised CVP
00:00	Scenario	Breathing spontaneously
00:00	Scenario	Cardiac tamponade: severe
00:01	Action	Speed ×4
05:59	Alarm	SpO_2: low perfusion
06:13	Scenario	Scenario state: Deteriorating: systolic below 80
07:31	Alarm	ART: no pulsatile pressure
07:48	Patient	Pulse lost (the model)
07:49	Scenario	Scenario state: PEA: organised rhythm, no pulse; the pericardium holds about 370 mL
07:49	Scenario	Cardiac tamponade: severe
07:58	Alarm	SpO_2: no pulse detected
08:00	Scenario	Scenario state: CPR, ventilated with FiO_2 1.0
08:00	Scenario	CPR started, 110 /min
08:00	Scenario	Tracheal tube in place
08:00	Scenario	Ventilator: RR 12 /min, VT 500 mL, PEEP 5 cmH_2O, FiO_2 100 %
08:00	Patient	Ventilated breaths began
08:17	Alarm	SpO_2: low perfusion
10:00	Scenario	Scenario state: CPR: pericardium drained, catheter left in
10:00	Scenario	Cardiac tamponade: severe
11:37	Patient	Circulation returned (the model)
12:01	Scenario	Scenario state: Return of circulation: ventilated, catheter in the pericardium
12:01	Scenario	CPR stopped
12:33	Scenario	Scenario state: Post-ROSC: 500 mL crystalloid running
12:33	Scenario	Crystalloid 500 mL over 5 min
